*Rand article from wiki

Any film may also have a sequel, which portrays events following those in the film. *Bride of Frankenstein* is an early example. When there are more films than one with the same characters, story arcs, or subject themes, these movies become a series, such as the James Bond series. And, existing outside a specific story timeline usually, does not exclude a film from being part of a series. A film that portrays events occurring earlier in a timeline with those in another film, but is released after that film, is sometimes called a prequel, an example being *Butch and Sundance: The Early Days*.

Technology See also: Cinematic techniques Film stock consists of transparent celluloid, acetate, or polyester base coated with an emulsion containing light-sensitive chemicals. Cellulose nitrate was the first type of film base used to record motion pictures, but due to its flammability was eventually replaced by safer materials. Stock widths and the film format for images on the reel have had a rich history, though most large commercial films are still shot on and distributed to theaters as 35 mm prints. Originally moving picture film was shot and projected at various speeds using hand-cranked cameras and projectors though 1000 frames per minute. 16 frames is generally cited as a standard silent speed, research indicates most films were shot between 16 frames and 23 frames and projected from 18 frames on up often reels included instructions on how fast each scene should be shown.¹³ When sound film was introduced in the late 1920s, a constant speed was required for the sound head. 24 frames per second were chosen because it was the slowest and thus cheapest speed which allowed for sufficient sound quality.citation needed Improvements since the late 19th century include the mechanization of cameras – allowing them to record at a consistent speed, quiet camera design – allowing sound recorded on-set to be usable without requiring large blimps to encase the camera, the invention of more sophisticated filmstocks and lenses, allowing directors to film in increasingly dim conditions, and the development of synchronized sound, allowing sound to be recorded at exactly the same speed as its corresponding action. The soundtrack can be recorded separately from shooting the film,

but for live-action pictures, many parts of the soundtrack are usually recorded simultaneously.

Although San Francisco County began to allow cinemas to reopen on October 7, the majority of cinemas remain closed due to a boycott by the National Association of Theatre Owners of CaliforniaNevada, due to local guidelines prohibiting the sale of concessions. The group stated that this restriction makes it economically impossible for our members to reopen and significantly limits the moviegoing experience for our audiences.¹⁹¹ Cinemark announced later that month that it would reopen selected cinemas in the Bay Area and Santa Clara County, operating in compliance with the concessions prohibition.¹⁹² On October 17, New York announced that it will allow cinemas outside New York City and situated in counties with a 14-day average of cases below 2% to reopen on October 23, at a maximum capacity of 50 patrons per-screen.¹⁹³ On November 9, 2020, Regal announced that the selected California and New York locations it had recently reopened would close indefinitely November 12.¹⁹⁴ The same day, the share prices of AMC, Cinemark, and Disney rose on early reports by Pfizer on the efficacy of a COVID-19 vaccine in development by the company and BioNTech.¹⁹⁵¹⁹⁶
